GRUPPO
PICCINI

OUR CONTRIBUTION TO THE WORLD IN MOTION.

The world has been on the move since ever. Those who need to transport, move, and lift important assets require a single point of contact that is reliable, equipped and takes care of everything, guarantees security and saves resources. Piccini has been doing this for almost 70 years: this is a family tradition and a consolidated experience.

Mobility is a fundamental right of the individual. Let's help the world to move ahead.

Machines are reliable when there are reliable people behind. This is the basic principle of our natural bent.

PEOPLE AND TECHNOLOGY TOGETHER MAKE THE DIFFERENCE.

Our engineers and our machines have performed significant handlings, such as the launchings of the most impressive Mega Yachts, have lifted and transported huge turbines, built massive structures and carried huge oversized loads. We have gained the trust of local companies and large multinationals operating in Italy.

TRANSPORT AND HANDLING SERVICES.

Our country features many special characteristics: these include its shape, which is spectacular, but forces us to massive road transport and rather complex industrial handlings. Construction, industry, handicrafts and many other sectors today have a reliable partner.

CRANES

When handling conditions are extreme or impossible, our powerful cranes and our engineers step in and guarantee accurate design, timeliness, reliability and absolute security and safety.

CRANE TRUCKS

Transporting finished raw materials or high technology semi-finished products requires adequate means and especially expert assistance, from shipping to downloading. In this, we are a true partner.

OVERSIZED LOADS

We are subcontractors and take charge of road and sea transport by means of a fleet of versatile, powerful and environmentally friendly vehicles. We also provide private escorting services and take charge of the necessary permits.

AERIAL PLATFORMS

Our equipment is a reference point for maintenance organisations and for industry-, craft-, construction- and manning-related uses. We provide dry hiring services and rental with full technical support.

LIABILITY AND FULL SERVICE.

We always guarantee a solution. We take care of the technical inspection, the project design, the set up of fleet, the infrastructure adjustment, we check the routes, ensure the safety measures and monitor the results. Transporting, handling, and lifting across Europe has never been so simple. With a single point of contact.

Member of CISQ Federation

We attach great importance to our customers, employees, suppliers and equipment through **ISO 9001:2015** and **BS OHSAS 18001:2016** quality management system.

TRANSPORTING, HANDLING AND LIFTING EVERYWHERE AND WITHOUT ANY WORRY.

1

We are professional and we know our job. We offer full service without any worry.

2

Our services and costs are clear. We are always on call, in person, and available.

3

We are directly liable for what we do and we are also responsible for our partners.

ADVANCED COACHING AND MEANS.

Our knowledge and skills put us ahead in our sector. We provide cutting edge fleet and equipment and our technicians are highly trained. We abide by the standards set in the “Single Text on Safety at Work”, and often we exceed them. We are cost-conscious, follow the procedures, and only work with partners featuring our same professional level.
